

3DX-RAY

Portable options **NEW**

I-Trigger (hand controller assembly)

The I-Trigger can be used with just PF film and a 3DX-RAY generator to initiate x-rays and produce high quality images. There is no need for software or setting a time delay on the generator.

The I-Trigger consists of an adapter, ethernet cable and hand controller.

The cable is available in 25m, 50m and 100m options.

The hand controller has two modes: 'vigilance' or 'toggle'. Both modes make operation much safer than a time delay preset.

I-Range (wireless boosters)

The I-Range is a wireless transceiver.

It extends the standard built-in wireless communication range from 100m to an impressive 300m between the imaging station and inspection area.

The I-Range has two components; easily attach one to the panel and the other to the imaging station, where the operator is located and thereby creating a longer safe distance to view images from in real time.

Under-vehicle Trolley (for LS1 panel)

Quick and easy to use, simply place the ThreatScan®-LS1 detector panel on the trolley and slide under the vehicle to scan for potential threats.

The trolley could also be used to slide the LS1 panel underneath cabinets or other items that you want to scan internally without taking the item apart.

Position the generator above the area to be scanned and slide the panel underneath before scanning remotely from the imaging station.

Help Desk Support

A 3DX-RAY help desk support contract will provide online support for your software and hardware issues.

Highly trained dedicated personnel are available from 08h30 until 17h00 Monday to Friday (excl national and 3DX holidays) with access to the latest technology to assist you in problem solving.

Benefits include priority attention from our qualified engineers, software upgrades on compatible systems, and free training at either 3DX premises or via the internet.

Upgrade to ThreatScan®

Replace your existing 3DX-RAY panel with our latest ThreatScan® panel, either the large format LS1 or compact LS3.

The upgrade also includes the latest compatible software release and 12-month standard 3DX-RAY warranty on your new panel.

Contact your account manager or email sales@3dx-ray.com to discuss this option further.

Add ThreatScan®-LS3

Be prepared for all scenarios, no matter the size of the potential threat, by adding the ThreatScan®-LS3 panel to your existing LS1 system.

The ThreatScan®-LS3 is a compact detector panel designed to operate with the Threatscan® portable x-ray system (panel, generator and imaging station).

The LS3 panel can be integrated into a LS1 system with a simple software update, allowing the operator to switch quickly and easily between the large LS1 panel and the compact LS3 panel.
